This Quick Reference Guide is a summary of basic vehicle operations. It contains brief descriptions of fundamental operations so you can locate and use the vehicle’s main equipment quickly and easily.

The Quick Reference Guide is not intended as a substitute for the Owner’s Manual located in your vehicle’s glove box. We strongly encourage you to review the Owner’s Manual and supplementary manuals so you will have a better understanding of your vehicle’s capabilities and limitations.

Your dealership and the entire staff of Toyota Motor North America, Inc. wish you many years of satisfied driving in your new Corolla Hybrid.

A word about safe vehicle operations

This Quick Reference Guide is not a full description of Corolla Hybrid operations. Every Corolla Hybrid owner should review the Owner’s Manual that accompanies this vehicle.

Pay special attention to the boxed information highlighted in color throughout the Owner’s Manual. Each box contains safe operating instructions to help you avoid injury or equipment malfunction.

All information in this Quick Reference Guide is current at the time of printing. Toyota reserves the right to make changes at any time without notice.

Indicator symbols

For details, refer to “Indicators and warning lights,” Section 2-2, 2020 Owner’s Manual.

- “AIR BAG ON/OFF” indicator
- Airbag SRS warning
- Anti-lock Brake System (ABS) warning
- Automatic High Beam (AHB) indicator
- Blind Spot Monitor (BSM) indicator
- BSM outside rear view mirror indicators
- Brake hold operated indicator
- Brake hold standby indicator
- Brake Overrride System/Drive-Start Control warning
- Brake system warning
- Brake system warning (yellow indicator)
- Charging system warning
- Constant speed cruise control indicator/Constant speed cruise control SET indicator
- Driver’s and front passenger’s seat belt reminder (alarm will sound if speed is over 12 mph)
- Electric power steering system warning (red/yellow indicator)
- Eco drive mode indicator
- EV drive mode indicator
- EV indicator
- Fuel tank door position
- Full-Speed Dynamic Radar Cruise Control (DRCC) indicator/DRCC SET indicator
- Headlight low/high beam indicators
- High coolant temperature warning
- Hybrid system overheat warning
- Lane Tracking Assist (LTA)/Lane Departure Alert (LDA) indicator
- Low engine oil pressure warning
- Low fuel level warning
- Low outside temperature indicator
- Low Tire Pressure Warning
- Malfunction/Check Engine indicator
- Parking brake indicator
- Pre-Collision System (PCS) warning
- Power mode indicator
- READY indicator
- Slip indicator
- Rear passengers’ seat belt reminder
- Security indicator
- Smart Key system indicator
- Turn signal indicator
- Vehicle Stability Control (VSC) OFF indicator

1 If the indicator does not turn off within a few seconds of starting the Hybrid system, there may be a malfunction. Have the vehicle inspected by your Toyota dealer.

2 If the indicator flashes, there may be a malfunction. Refer to the Owner’s Manual.

3 If the indicator flashes, it indicates that the system is operating.

4 If equipped.
OVERVIEW

**Keyless entry**

### UNLOCKING OPERATION

**Smart Key**

- **Carry Smart Key remote**
- **Front door unlock**

- **Grasp**
- **Push**

Push ONCE: Driver door
TWICE: All doors

**NOTE:** If a door is not opened within 60 seconds of unlocking, all doors will relock for safety.

### LOCKING OPERATION

**Smart Key**

- **Carry Smart Key remote**
- **All-door lock**

- **Touch**
- **Push**

### TRUNK LOCKING/UNLOCKING

**Smart Key**

- **Carry Smart Key remote**

- **Push and hold**

### PANIC BUTTON

**Smart Key**

- **Push and hold**

* Driver door unlocking function can be programmed to unlock driver door only, or all doors. In some models, grasping front passenger door handle will unlock all doors.

*Please refer to the Owner’s Manual for more details on how to program the doors.*

**NOTE:** Doors may also be locked/unlocked using remote.
**Smart Key system**

### START FUNCTION

NOTE: The Smart Key must be carried to enable the start function. With the Park position selected and the brake pedal depressed, push the “POWER” switch.

### POWER (WITHOUT STARTING HYBRID SYSTEM)

Without depressing the brake pedal, pressing the “POWER” switch will change the operation mode in succession from:

- **Off**: All systems OFF. Emergency flashers can be used.
- **Accessory**: Some electrical components can be used.
- **On**: All electrical components can be used.

**NOTE:** Tighten until one click is heard. If the cap is not locked or tightened, Check Engine “CHECK” indicator may illuminate.

### Fuel tank door release & cap

**NOTE:** Tighten until one click is heard. If the cap is not locked or tightened, Check Engine “CHECK” indicator may illuminate.
**Hood release**

1. Pull up latch and raise hood
2. Insert rod to hold hood open

**Instrument panel light control**

- Switch to adjust instrument panel light brightness.
NOTE: Regularly scheduled maintenance, including oil changes, will help extend the life of your vehicle and maintain performance. Please refer to the “Warranty & Maintenance Guide.”
FEATURES & OPERATIONS

Hybrid Synergy Drive System

The Hybrid Synergy Drive System utilizes a computer-controlled gasoline engine and electric motor to provide the most efficient combination of power for the vehicle. To conserve energy, when the brakes are applied the braking force generates electricity which is then sent to the traction battery. In addition, the engine shuts off when the vehicle is stopped. The benefits are better fuel economy, reduced vehicle emissions and improved performance.

NOTE: Fuel consumption and energy information of the Hybrid System are shown on the Entune™ 3.0 Audio system screen or the navigation system.

TIPS FOR IMPROVED FUEL ECONOMY

- Ensure tire pressures are maintained at levels specified in the Owner's Manual.
- When possible, link trips to reduce engine cold starts.
- Avoid driving at speeds that are higher than necessary, especially on the highway.
- When possible, avoid sudden stops to maximize regenerative braking energy.
- Minimize use of the air conditioning.

STARTING YOUR VEHICLE

1. Put the selector lever in “P.”
2. Depress the brake pedal, and “F” will be displayed on the Multi-Information Display (MID).
3. Press the “POWER” switch briefly and firmly.
4. The “READY” light will blink. After a few seconds, when the light remains steady and a beep sounds, you may begin driving.
Auto lock/unlock

Automatic door locks can be programmed to operate in different modes, or turned OFF.

Shift position linked door locking/unlocking function
- Doors lock when shifting from Park.
- Doors unlock when shifting into Park.

Speed linked door locking function
- Doors lock when the vehicle speed goes above approximately 12 mph.

Driver’s door linked door unlocking function
- Doors unlock when the engine switch is set to OFF and driver’s door is opened.

Refer to the Owner’s Manual for more details.

Hybrid transmission

* The “POWER” switch must be in the “IGNITION ON” mode and the brake pedal depressed to shift from Park.

Door locks
Driving mode select

Normal mode
Suitable for normal driving.

POWER mode
Controls the hybrid system to provide quick, powerful acceleration. Making it suitable for when agile driving response is desired, such as when driving on roads with many curves.

ECO drive mode
Helps the driver accelerate in an eco-friendly manner and improve fuel economy through moderate throttle characteristics and by controlling the operation of the air conditioning system (heating/cooling).

Refer to the Owner’s Manual for more details.

EV drive mode

Use EV drive mode when driving short distances to reduce noise late at night in residential areas or to cut emissions when parking in a small garage or underground car park.
**Steering lock release**

When the steering lock cannot be released, “Push Power Switch while Turning Steering Wheel in Either Direction” will be displayed on the multi-information display. Press the power switch shortly and firmly while turning the steering wheel left and right.

**Tilt & telescopic steering wheel**

Hold wheel, push lever down, set angle and length, and return lever.

**NOTE:** Do not attempt to adjust while the vehicle is in motion.

**Windows-Power**

**Driver side**

**All window auto up/down**
Push the switch completely down or pull it completely up and release to fully open or close. To stop the window partway, operate the switch in the opposite direction.

**Window lock switch**
Deactivates all passenger windows. Driver’s window remains operable.
Electric parking brake

**Automatic mode ON**

- While vehicle is stopped, pull and hold switch until “EPB Shift Interlock Function Activated” displays in Multi-Information Display (MID).
- While depressing brake, shifting into P position will automatically set the brake and turn the parking brake indicator and parking brake light on. To release brake, depress brake and shift out of P. The indicator light and the light on the switch turn off.

**Automatic mode OFF**

- Push and hold parking brake switch until “EPB Shift Interlock Function Deactivated” displays on the MID.

**Manual mode (Brake HOLD switch)**

- While vehicle is stopped and brake pedal is depressed, pull to set parking brake and turn the parking brake indicator and parking brake light on. To release, press the brake pedal and push switch. The indicator light turns off.

**Brake hold**

- The brake hold system keeps the brake applied when the shift lever is in D, B or N with the system on and the brake pedal has been depressed to stop the vehicle. The system releases the brake when the accelerator pedal is depressed with the shift lever in D or B to allow smooth start off.

*Refer to the Owner’s Manual for limitations and more details.*
Multi-Information Display (MID)

7-inch display

Driving support system status display area

Content display area

Meter control switches

Previous screen

Enter/Select

Scroll/search screens

Push "<" or ">" and "OK" on steering wheel to change and select information in the following:

- Driving information display
- Driving support system information display
- Audio system-linked display
- Vehicle information display
- Settings display
- Warning message display
**FEATURES & OPERATIONS**

### Seat adjustments-Front

**MANUAL SEAT**
- Seat position (forward/backward)
- Lumber support* (driver’s side only)
- Seatback angle
- Height crank (driver’s side only)

**POWER SEAT (DRIVER’S SIDE ONLY)**
- Seat position (forward/backward), cushion (front) angle and height
- Lumber support* (driver’s side only)
- Seatback angle

*If equipped

---

### Rear seats-Folding

- Fold down
- Push

---

### Seats-Head restraints

**Front**
- Lock release button

**Rear outside (adjustable type)**
- Lock release button

*If equipped
**Lights & turn signals**

**HEADLIGHTS**

- **Daytime Running Light system (DRL)** Automatically turns on under certain conditions to make vehicle more visible to other drivers. Not for use at night.
- **Automatic light cut off system** Automatically turns lights off after 30 second delay, or lock switch on remote is pushed after all doors are locked.
- **Automatic High Beam (AHB) system** Automatically switches between high and low beams as appropriate for enhanced vision at night.

Refer to Toyota Safety Sense™ (TSS) in this guide or the Owner’s Manual for more details on the Automatic High Beam feature.

* Operating conditions must be met. Refer to the Owner’s Manual for details.

**TURN SIGNALS**

* Move lever partway and release; the signals will flash three times
**FEATURES & OPERATIONS**

**Windshield wipers & washers**

* Intermittent windshield wiper frequency adjustment Rotate to increase/decrease wipe frequency. (Available on select grades.)

Refer to the Owner’s Manual for more information.

**Power outlet-12V DC**

The power switch must be in the IGNITION ON mode position for use.

**USB media/AUX port**

**USB media port**

By connecting a USB-compatible portable audio device or USB memory stick into the USB media port, you can listen to music through the vehicle’s speaker system.

**AUX port**

By inserting an AUX cable into the AUX port, you can listen to music from a portable audio device through the vehicle’s speaker system while in AUX mode.
A mobile device can be charged wirelessly on the tray. **(1)** Press the wireless charger power switch and the green operation indicator light turns on. **(2)** Place a compatible mobile device on the tray as shown in the illustration. An amber indicator illuminates while charging is in progress. When charging is complete, the indicator illuminates green. Some phones, cases or cover type wireless chargers may not cause the green indicator to illuminate even though it is fully charged.

Refer to the Owner’s Manual for more details on this system before attempting to use it.
NOTE: Concentrating on the road should always be your first priority while driving. Do not use the Audio Multimedia system if it will distract you.

To find your system, refer to Audio section of this guide.

1) Push “MENU” button next to the screen.
2) Select “Setup” or “General” in the touch screen to access the general settings screen.
3) Select “Clock.”
4) Then select desired items to be reset.

Refer to the “Navigation and Multimedia System Owner’s Manual” for more details.

* Entune™ 3.0 Premium Audio only.
Bluetooth® technology allows dialing or receipt of calls without removing your hands from the steering wheel.

* Push and hold to access Mobile Assistant. When a compatible smartphone is Bluetooth® connected push and hold the Voice command switch 2-3 seconds to access Siri® Eyes Free.

Refer to the “Bluetooth® Device Pairing Section” in this guide for more information about phone connections and compatibility.

NOTE: Concentrating on the road should always be your first priority while driving. Do not use the Entune system if it will distract you.
**Features & Operations**

**Air conditioning/heating**

**Automatic Air Conditioning**

- **Airflow vent mode**
- **Eco air conditioning mode**
- **Fan speed**
- **Temperature control**
- **Windshield defogger**
- **Climate control OFF**
- **Outside rearview mirror defogger/Rear window defogger**
- **Recirculate cabin air (outside air when OFF)**
- **S-FLOW mode**

**Automatic climate control ON**
Adjusting the temperature setting will cause the airflow vents, air intake and fan to adjust automatically to set temperature.

**Bottle holders**

- **Front**
- **Rear**

**Cup holders**

- **Front**
- **Rear (if equipped)**
The VSC OFF switch can be used to help free a stuck vehicle in surroundings like mud, dirt or snow. While the vehicle is stopped, press the switch to disable the TRAC system.

To disable both VSC and TRAC systems, press and hold the switch for at least 3 seconds.

Refer to the Owner’s Manual for limitations and more details.

The rear view monitor system displays an image of the view from the bumper of the rear area of the vehicle. The camera for the rear view monitor system is located above the license plate.

To adjust the image on the rear view monitor screen, press the “MENU” button and select “Display” on the screen. Select “Camera” to adjust the screen contrast and brightness.

Refer to the Owner’s Manual and the Navigation and Multimedia Owner’s Manual for limitations and more details on this system.

Vehicle Stability Control (VSC)/TRAC OFF switch

The VSC OFF switch can be used to help free a stuck vehicle in surroundings like mud, dirt or snow. While the vehicle is stopped, press switch to disable the TRAC system.

To disable both VSC and TRAC systems, press and hold the switch for at least 3 seconds.

Refer to the Owner’s Manual for limitations and more details.
Toyota Safety Sense™ (TSS) is a set of active safety technologies designed to help mitigate or prevent collisions across a wide range of traffic situations, in certain conditions. TSS is designed to help support the driver’s awareness, decision making and vehicle operation contributing to a safe driving experience.

Refer to the Owner’s Manual for operation, setting adjustments, limitations and more details to understand these functions and complete safety precautions. For more information, please go to http://www.toyota.com/safety-sense

**Quick overview-Toyota Safety Sense™ 2.0**

- **Pre-Collision System with Pedestrian Detection (PCS w/PD)**
  PCS w/PD is designed to provide alert, mitigation, and/or avoidance support in certain conditions, when the system detects a potential collision with a preceding vehicle is likely to occur. Advanced millimeter-wave radar sensor system is designed to work with the camera sensor to help recognize a preceding pedestrian or bicyclist, and provide an alert, mitigation and/or avoidance support in certain conditions.

- **Lane Departure Alert with Steering Assist (LDA w/SA)**
  LDA w/SA is designed to provide notification when the system detects an unintended lane departure. The Steering Assist function is designed to provide small corrective steering inputs to the steering wheel for a short period of time to help keep the vehicle in its lane. The Sway Warning function is designed to detect vehicle swaying (based on the vehicle location and steering wheel operation) and alert the driver with an audio and visual alert, urging them to take a break.

- **Lane Tracing Assist (LTA)**
  LTA is designed to help keep the vehicle in the center of a lane by assisting the driver in steering control when using Full-Speed Range DRCC.

- **Full-Speed Range Dynamic Radar Cruise Control (DRCC)**
  DRCC is designed to help maintain a pre-set distance to a preceding vehicle when the preceding vehicle is traveling at a lower speed. Full-Speed Range DRCC is the same as regular DRCC except the available speed range is extended down to 0 MPH.

- **Automatic High Beams (AHB)**
  AHB is designed to detect the headlights of oncoming vehicles and the tail lights of preceding vehicles and switch between high beams and low beams as appropriate.

- **Road Sign Assist (RSA)**
  RSA is designed to recognize specific road signs using the forward facing camera to provide information to the driver via the display.
TSS combines an in-vehicle camera mounted in front of the inside rear view mirror and a radar mounted in the front grill. These sensors support the driver assist systems.

Pre-Collision System with Pedestrian Detection (PCS w/PD)

The Pre-Collision System uses a radar sensor and camera sensor to help detect a vehicle or pedestrian or bicyclist in front of your vehicle.

As there is a limit to the degree of recognition accuracy and control performance that this system can provide, do not overly rely on this system. This system will not prevent collisions or lessen collision damage or injury in every situation. Do not use PCS instead of normal braking operations under any circumstances. Do not attempt to test the operation of the Pre-Collision System yourself, as the system may not operate or engage, possibly leading to an accident. In some situations, such as when driving in inclement weather such as heavy rain, fog, snow or a sandstorm or while driving on a curve and for a few seconds after driving on a curve, a vehicle or pedestrian or bicyclist may not be detected by the radar and camera sensors, preventing the system from operating or engaging properly.

Refer to the Toyota Owner’s Manual for a list of additional situations in which the system may not operate properly.

Pre-Collision Warning
When the system determines that the possibility of a frontal collision is high, a buzzer will sound and a warning message will be displayed on the Multi-Information Display (MID) to urge the driver to take evasive action.

Pre-Collision Brake Assist
If the driver notices the hazard and brakes, the system may provide additional braking force using Brake Assist. This system may prime the brakes and may apply greater braking force in relation to how strongly the brake pedal is depressed.
Pre-Collision Braking
If the driver does not brake in a set time and the system determines that the possibility of a frontal collision with a preceding vehicle is extremely high, the system may automatically apply the brakes, reducing speed in order to help the driver reduce the impact and in certain cases avoid the collision.

Refer to the Toyota Owner’s Manual for additional information on PCS operation, settings adjustments, limitations, and precautions before attempting to use it.

PCS PEDESTRIAN DETECTION
Under certain conditions, the PCS system included with the TSS package may also help to detect a pedestrian or bicyclist in front of your vehicle using the in-vehicle camera and millimeter-wave radar. The in-vehicle camera of PCS detects a potential pedestrian or bicyclist based on size, profile, and motion of the detected pedestrian or bicyclist. However, a pedestrian or bicyclist may not be detected depending on the conditions, including the surrounding brightness and the motion, posture, size, and angle of the potential detected pedestrian or bicyclist, preventing the system from operating or engaging.

As part of the Pre-Collision System, this function is also designed to first provide an alert and then automatic braking if needed.

Refer to the Toyota Owner’s Manual for additional limitations and information.
CHANGING PRE-COLLISION ALERT TIMING

Each time the PCS switch is pressed, the response to the PCS alert timing changes.

1. Press "<" switches and select from the Multi-Information Display (MID).
2. Press "C" switches and select from the MID and then press "OK". The setting screen is displayed.
3. Press "OK" each time to change the setting. Each time it is pressed, the response to the PCS alert timing changes as shown above. You can press "<" to go back to the menu.

Note: PCS is enabled each time the engine switch is turned to Ignition On. The system can be disabled/enabled and the alert timing of the system can be changed. (Alert timing only, brake operation remains the same).

DISABLING PRE-COLLISION SYSTEM (PCS)

1. Press "<" switches and select from the Multi-Information Display (MID).
2. Press "C" and "OK" switches to change the setting.
3. Press "OK" to go back to the menu.

Note: The system is enabled each time the power switch is turned to ON mode.

Refer to the Toyota Owner’s Manual for additional information on PCS operation, settings adjustments, limitations, and precautions before attempting to use it.
LDA in TSS uses an in-vehicle camera designed to detect visible white and yellow lane markers or road edge in front of the vehicle and the vehicle’s position on the road. If the system determines that the vehicle is starting to unintentionally deviate from its lane, the system alerts the driver with an audio and visual alert. When the alerts occur, the driver must check the surrounding road situation and carefully operate the steering wheel to move the vehicle back to the center part of their lane.

LDA is designed to function at speeds of approximately 32 mph (50 km/h) or higher on relatively straight roadways.

In addition to the alert function, LDA w/SA also features a steering assist function. When enabled, if the system determines that the vehicle is on a path to unintentionally depart from its lane, the system may provide small corrective steering inputs to the steering wheel for a short period of time to help keep the vehicle in its lane.

If the vehicle repeatedly deviates from the lane, the vehicle drifts within the lane due to inattention, or the driver abruptly operates the steering wheel after an inattentive period, when enabled, the vehicle sway warning function alerts the driver with an audio and visual alert, urging them to take a break.

**TURNING THE LDA SYSTEM ON/OFF**

Press the LDA switch to turn the LDA system on. Depress again to turn it off.

**Note:** Operation of the LDA system and setting adjustments continues in the same condition regardless of Ignition cycle until changed by the driver or the system is reset.

Refer to the Toyota Owner’s Manual for additional information on LDA operation, settings adjustments, limitations, and precautions before attempting to use it.
Lane Departure Alert (LDA) indicator flashes orange when operating.

The LDA function displays when the Multi-Information Display (MID) is switched to the driving assist system information screen.

(1) The system displays solid white lines on the LDA indicator when visible lane markers or the road are detected. A side flashes orange to alert the driver when the vehicle deviates from its lane.

(2) The system displays outlines on the LDA indicator when lane markers or the road are not detected or the function is temporarily cancelled.

Note: When operation conditions are no longer met, a function may be temporarily canceled. However, when the operation conditions are met again, operation of the function is automatically restored. For example, LDA may not function on the side(s) where white/yellow lines are not detectable.

Refer to the Toyota Owner’s Manual for additional information on LDA operation, settings adjustments, limitations, and precautions before attempting to use it.
ADJUSTING LDA ALERT SENSITIVITY

The driver can adjust the sensitivity of the LDA (warning) function from the Multi-Information Display (MID) customization screen.

- **High** - Is designed to warn approximately before the front tire crosses the lane marker.
- **Normal** - Is designed to warn approximately when the front tire crosses the lane marker.

1. Press “\[\]” switches and select \[\] from the Multi-Information Display (MID).
2. Press “\[\]” switches and select the \[\] setting function and then press “\[\]”.
3. Press “\[\]” each time to change the setting.
4. Press “\[\]” to go back to the menu.

Note: Operation of the LDA system and setting adjustments continues in the same condition regardless of Ignition cycle until changed by the driver or the system is reset.

SWAY WARNING SYSTEM

SWS is a function of LDA and is designed to detect swaying based on the vehicle location in the lane and the driver’s steering wheel operation. To help prevent swaying, the system alerts the driver using a buzzer sound and a warning displays in the MID.
DISABLING LDA SWAY WARNING ALERT

(1) Press “سجل” switches and select 🔄 from the Multi-Information Display (MID).
(2) Press “سجل” switches and select the 🍵 setting function and then press “확인”.
(3) Press “확인” each time to change the setting.
(4) Press “뒤로” to go back to the menu.

Note: Operation of the LDA system and setting adjustments continues in the same condition regardless of Ignition cycle until changed by the driver or the system is reset.

ADJUSTING SWAY ALERT SENSITIVITY

(1) Press “سجل” switches and select 🔄 from the Multi-Information Display (MID).
(2) Press “سجل” switches and select the 🍵 setting function and then press “확인”.
(3) Press “확인” each time to change the setting.
(4) Press “뒤로” to go back to the menu.

Lane Tracing Assist (LTA)

When the LTA system is enabled, the lane centering function will automatically provide assistance to help keep the vehicle in the center of the lane when Full-Speed DRCC is set.
Press the LTA switch to turn the LTA system on. Depress again to turn it off.

**Note:** Operation of the LTA system and setting adjustments continues in the same condition regardless of Ignition cycle until changed by the driver or the system is reset.

Refer to the Toyota Owner’s Manual for additional information on LTA operation, settings adjustments, limitations, and precautions before attempting to use it.

**LANE TRACING ASSIST**

**LTA function display**

Lane Tracing Assist (LTA) indicator flashes orange when operating.
The LTA function [ ] displays when the Multi-Information Display (MID) is switched to the driving assist system information screen.

(1) The system displays solid white lines on the LTA indicator when visible lane markers on the road are detected. A side flashes orange to alert the driver when the vehicle deviates from its lane.

(2) The system displays outlines on the LTA indicator when lane markers on the road are not detected or the function is temporarily cancelled.

Note: When operation conditions are no longer met, a function may be temporarily canceled. However, when the operation conditions are met again, operation of the function is automatically restored. For example, LTA may not function on the side(s) where white/yellow lines are not detectable.

Refer to the Toyota Owner’s Manual for additional information on LTA operation, settings adjustments, limitations, and precautions before attempting to use it.

### Disabling Steering Assist

(1) Press “ ” switches and select [ ] from the Multi-Information Display (MID).

(2) Press “ ” switches and select the [ ] setting function and then press “ .”

(3) Press “ ” each time to change the setting.

(4) Press “ ” to go back to the menu.

Note: Operation of the LTA system and setting adjustments continues in the same condition regardless of Ignition cycle until changed by the driver or the system is reset.

### Adjusting LTA Alert Sensitivity

The driver can adjust the sensitivity of the LTA (warning) function from the Multi-Information Display (MID) customization screen.

- **High** - Is designed to warn approximately before the front tire crosses the lane marker.
- **Normal** - Is designed to warn approximately when the front tire crosses the lane marker.

(1) Press “ ” switches and select [ ] from the Multi-Information Display (MID).

(2) Press “ ” switches and select the [ ] setting function and then press “ .”

(3) Press “ ” each time to change the setting.

(4) Press “ ” to go back to the menu.
The lane centering function is linked with Full-Speed Range Dynamic Radar Cruise Control (DRCC) and provides the required assistance by operating the steering wheel to keep the vehicle in its current lane.

When dynamic radar cruise control with full-speed range is not operating, the lane centering function does not operate.

**DISABLING LANE CENTERING FUNCTION**

1. Press “< >” switches and select from the Multi-Information Display (MID).
2. Press “ chimney” switches and select the “Lane center” setting function and then press “OK.”
3. Press “OK” each time to change the setting.
4. Press “=” to go back to the menu.

**Note:** Operation of the LTA system and setting adjustments continues in the same condition regardless of Ignition cycle until changed by the driver or the system is reset.
**Full-Speed Range Dynamic Radar Cruise Control (DRCC)**

DRCC helps maintain a pre-set distance to a preceding vehicle when the preceding vehicle is traveling at a lower speed. This mode is always selected first when the cruise control button is depressed. Constant speed cruise control mode is also available. Full-Speed Range DRCC is designed to function at speeds between 0 to approximately 110 MPH and is intended for highway use.

**TURNING SYSTEM ON/OFF**

1. Push once: On
2. Push twice: Off

Refer to page 37 for switching to Constant Speed (Cruise) Control Mode.

**ADJUSTING SET SPEED**

1. Push “=” to turn DRCC system ON.
2. Use the steering wheel controls to increase speed by pushing “+RES” or decrease the speed by pushing “-SET”. Push and hold to make a large adjustment or push each time to make fine adjustments (1 mph [1.6 km/h] or 1 km/h [0.6 mph] increments).
3. Push “Cancel” to cancel the adjusting speed operation.

Vehicle will cruise at a set speed, decelerate to maintain selected distance from a slower vehicle traveling in front and accelerate back up to the selected speed if the vehicle in front changes lanes or speeds up.

1. The set speed may be resumed once vehicle speed exceeds 25 mph.
2. The set speed may also be cancelled by depressing the brake pedal.
This mode employs a radar sensor to detect the presence of a preceding vehicle up to approximately 328 ft (100 m) ahead, determines the current vehicle-to-vehicle following distance and operates to maintain a preset following distance from the vehicle ahead. These distances vary based on vehicle speed.

**Note: Vehicle-to-vehicle distance will close in when traveling on long downhill slopes.**

(1) **Constant speed cruising when there are no vehicles ahead**
   - The vehicle travels at the speed set by the driver. The desired vehicle-to-vehicle distance can also be set by operating the vehicle-to-vehicle distance control.

(2) **Deceleration cruising and follow-up cruising when a preceding vehicle driving slower than the set speed appears**
   - When a vehicle is detected running ahead of you, the system automatically decelerates your vehicle. When a greater reduction in vehicle speed is necessary, the system applies the brakes (the brake lights will come on at this time). The system will respond to changes in the speed of the vehicle ahead in order to maintain the vehicle-to-vehicle distance set by the driver. A warning tone warns you when the system cannot decelerate sufficiently to prevent your vehicle from closing in on the vehicle ahead.
ADJUSTING DISTANCE (CONTINUED)

(3) Acceleration when there are no longer any preceding vehicles driving slower than the set speed
The system accelerates until the set speed is reached. The system then returns to constant speed cruising.

Note: When your vehicle is too close to a vehicle ahead, and sufficient automatic deceleration via the cruise control is not possible, the display will flash and the buzzer will sound to alert the driver. An example of this would be if another driver cuts in front of you while you are following a vehicle. Depress the brake pedal to ensure an appropriate vehicle-to-vehicle distance.

SWITCHING TO CONSTANT SPEED (CRUISE) CONTROL MODE

If you are already using DRCC “

, push ON-OFF button to turn the system off first, then push and hold ON-OFF button for at least 1.5 seconds to switch.

Note: When the engine is turned off, it will automatically default to DRCC.

SETTING CONSTANT SPEED (CRUISE) CONTROL

To adjust speed or cancel, see steps (2) and (3) of ADJUSTING SET SPEED on page 35.

Refer to the Toyota Owner’s Manual for additional information on DRCC operation, settings adjustments, limitations, and precautions before attempting to use it.
AHB is a safety system designed to help drivers see more of what’s ahead at nighttime while reducing glare for oncoming drivers. When enabled, AHB uses an in-vehicle camera to help detect the headlights of oncoming vehicles and tail lights of preceding vehicles, then automatically switches between high and low beams as appropriate to provide the most light possible and enhance forward visibility. By using high beams more frequently, the system may allow earlier detection of pedestrians and obstacles.

Refer to the Toyota Owner’s Manual for additional information on AHB operation, settings adjustments, limitations, and precautions before attempting to use it.

**ACTIVATING THE AHB SYSTEM**

1. Press the “A” switch.
2. Push lever away from you with the headlight switch is in the “” or “AUTO” position.

The AHB indicator will come on when the headlights are turned on automatically to indicate that the system is active.

**Note: Pull the lever back toward you or press the AHB switch to turn the AHB system off.**

The AHB indicator will turn off. To turn switch to “” position and the manual high beam indicator “” turns on.

**CONDITIONS WHERE AHB WILL TURN ON/OFF AUTOMATICALLY**

When all of these conditions are met, high beams will be automatically turned on (after approximately 1 second):

- Vehicle speed is above approximately 21 mph (34 km/h).
- The area ahead of the vehicle is dark.
- There are no oncoming or preceding vehicles with headlights or tail lights turned on.
- There are few streetlights on the road ahead.

If any of these conditions occur, high beams will be automatically turned off:

- Vehicle speed drops below approximately 17 mph (27 km/h).
- The area ahead of the vehicle is not dark.
- Oncoming or preceding vehicles have headlights or tail lights turned on.
- There are many streetlights on the road ahead.
Road Sign Assist (RSA)

Road Sign Assist is designed to help ensure drivers are kept informed. The RSA system recognizes specific road signs using a forward-facing intelligent camera to provide information to the driver via a Multi-information Display (MID). If the system judges that the vehicle is being driven over the speed limit, or performing actions prohibited by other support types of road signs, it alerts the driver using a warning display and may sound a warning buzzer.

RSA DISPLAY

When the driving support system information is selected, a maximum of 3 signs can be displayed.

When a tab other than the driving support system information is selected, only a recognized speed limit sign or do not enter sign (when notification is necessary) will be displayed.

SUPPORTED TYPES OF ROAD SIGNS

<table>
<thead>
<tr>
<th>Speed limit</th>
<th>Stop</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do Not Enter</td>
<td>Yield</td>
</tr>
</tbody>
</table>

SETTING RSA

1. Press “ ” switches and select from the Multi-Information Display (MID).
2. Press “ ” switches and select the setting function and then press “.”
3. Press “ ” each time to change the setting.
4. Press “ ” to go back to the menu.

Note: If the engine switch was last turned off while a speed limit sign was displayed on the multi-information display, the same sign displays again when the engine switch is turned back ON.

Refer to the Toyota Owner’s Manual for additional information on RSA operation, settings adjustments, limitations, and precautions before attempting to use it.
SAFETY & EMERGENCY FEATURES

**Seat belts**

NOTE: If a passenger’s seat belt is fully extended, then retracted even slightly, the Automatic locking retractor (ALR) will prevent it from being re-extended beyond that point, unless fully retracted again. This feature is used to help hold child restraint systems securely.

To find more information about seat belts, and how to install a child restraint system, refer to the Owner’s Manual.

**Seat belts-Shoulder belt anchor**

Moving the lever downward will allow the door to be opened only from the outside.

**Rear door child safety locks**

Moving the lever downward will allow the door to be opened only from the outside.

**Safety Connect (if equipped)**

Safety Connect is a subscription-based telematics service that uses Global Positioning System (GPS) data and embedded cellular technology to provide safety and security features to subscribers. Safety Connect is supported by Toyota’s designated response center, which operates 24 hours per day, 7 days per week.

Services for subscribers include:
- Automatic collision notification
- Stolen vehicle location
- Emergency assistance (“SOS” button)
- Enhanced roadside assistance

Contact your dealer for more information about Safety Connect.

For details, refer to the “Owner’s Manual” or visit www.Toyota.com/safety-connect.

The tire pressure warning system can be selected on " Gear " of the multi-information display (MID).

**System rest initialization**

1. Press " " switches and select from the Multi-Information Display (MID).
2. Press " " switches and select the "Vehicle Settings", then push " OK ".
3. Select "TPWS" and then push " OK ".
4. Select "Set Pressure" then push and hold " OK " until the warning light blinks three times.

The tire pressure detected by the tire pressure warning system can be displayed on the multi-information display (MID).

Refer to the load label on the door jamb or the Owner’s Manual for tire inflation specifications.

If the tire pressure indicator flashes for more than 60 seconds and then remains on, take the vehicle to your local Toyota dealer.

**NOTE:** The warning light may come on due to temperature changes or changes in tire pressure from natural air leakage. If the system has not been initialized recently, setting the tire pressures to factory specifications should turn off the light.
Spare tire & tools (if equipped)

TOOL LOCATION

Removal of the spare tire

Remove the luggage floor cover.

Remove the tool tray.

Loosen the center fastener that secures the spare tire.

Refer to the Owner’s Manual for tire changing and jack positioning procedures.
SAFETY & EMERGENCY FEATURES

Tire repair kit & tools (if equipped)

TOOL LOCATION

Jack and tools

Towing eyelet

Emergency tire puncture repair kit

Emergency tire puncture repair kit  *If equipped.

Tire repair kit components

Air release cap

Rubber stopper

Compressor switch

Sticker

Power plug

Air pressure gauge

Hose

Refer to the Owner’s Manual for jack positioning and tire changing procedures.
Your vehicle comes standard with the Star Safety System™, which combines Anti-lock Braking System (ABS), Brake Assist (BA), Electronic Brake-force Distribution (EBD), Smart Stop Technology (SST), Traction Control (TRAC) and Vehicle Stability Control (VSC).

Refer to the Owner’s Manual for more details and important information on limitations to these systems.

**ANTI-LOCK BRAKE SYSTEM (ABS)**

Toyota’s ABS sensors detect which wheels are locking up and limits wheel lockup by “pulsing” each wheel’s brakes independently. Pulsing releases brake pressure repeatedly for fractions of a second. This helps the tires attain the traction that current road conditions will allow, helping you to stay in directional control.

**BRAKE ASSIST (BA)**

Brake Assist is designed to detect sudden or “panic” braking, and then add braking pressure to help decrease the vehicle’s stopping distance. When there’s only a split second to react, Brake Assist can add additional brake pressure more quickly than just the driver alone can.

**ELECTRONIC BRAKE FORCE DISTRIBUTION (EBD)**

Toyota’s ABS technology has Electronic Brake-force Distribution (EBD) to help maintain control and balance when braking. EBD responds to sudden stops by redistributing brake force to enhance the braking effectiveness of all four wheels.

**SMART STOP TECHNOLOGY (SST)**

Smart Stop Technology automatically reduces engine power when the accelerator and brake pedals are pressed simultaneously under certain conditions.

SST engages when the accelerator is depressed first and the brakes are applied firmly for longer than one-half second at speeds greater than five miles per hour.

SST doesn’t engage if the brake pedal is depressed before the accelerator pedal, allowing vehicles to start on a steep hill and safely accelerate without rolling backward.

**ENHANCED VEHICLE STABILITY CONTROL (VSC)**

Enhanced Vehicle Stability Control provides cooperative control of the ABS, TRAC, VSC and EPS.

Enhanced VSC helps to maintain directional stability when loss of traction occurs during a turn.
There are two types of Toyota floor mats: carpeted and all-weather. Each vehicle has model-specific floor mats. Installation is easy.

To keep your floor mat properly positioned, follow these steps:

- Only use Toyota floor mats designed for your specific model.
- Use only one floor mat at a time, using the retaining hooks to keep the mat in place.
- Install floor mats right side up.

**Floor mat installation**

Always align the Δ marks
BLUETOOTH® DEVICE PAIRING SECTION

Do not attempt the Bluetooth® Pairing process while driving.
To begin the Bluetooth® Pairing process, press the HOME button on the faceplate of your multimedia system.

**Bluetooth® Pairing for your phone**

Pairing your phone is the first step in connecting with your Toyota for hands-free calling and for audio streaming via Bluetooth. This pairing process is quick and easy. All you have to do is setup the phone and multimedia system to form a connection.¹

[Image of Bluetooth pairing process]

**STEP 1**

Press [MENU] on the faceplate, then select "Setup" on display screen.

**STEP 2**

Ensure Bluetooth is turned on for your device.

**STEP 3**

Select "Bluetooth", then select "Add New Device" on display screen.

**STEP 4**

Select "Device Name".

**STEP 5**

Check the display on your smart phone. Does the PIN XXXX match the PIN displayed? If it does select "Pair".

¹ Some Android devices may have slightly different SETTINGS screen layout depending on manufacturer of device and Android OS version.
**BLUETOOTH® DEVICE PAIRING**

**Bluetooth® Pairing for your phone (cont.)**

**STEP 6**  
"Connecting" displays while device is forming the connection to your multimedia system.

**STEP 7**  
Enable Notifications (text message). While pairing your device message will display: "You may need to allow message access on your phone".

Note: You may also select "Skip" on display screen to skip enabling notifications. If skipped proceed to **Step 8**.

**STEP 8**  
Turn on "Show Notifications" for iPhone or "ON" for Android.

**STEP 9**  
A confirmation will appear once your phone has been paired and connected.
